

Genzyme

Rindge – New Hampshire

“My name is Sandra.”

“I’ve been sick since I was a kid...”

“It all started with a burning feeling under my skin...”

“I would have done anything to make the pain stop.”

No one knew what was wrong with Sandra.

“It was a relief when we finally put a name on the disease.”

“It’s called Fabry disease: it’s a genetic disease.”

“Two of my children also have it.”

Then, a team developed the first ever treatment for Fabry disease...

“So when the treatment got approved, it was like a new dawn.”

“With mom, we go to the hospital every other Friday.”

Having at last found a way to stop the pain changes everything...

“Now that I’m being treated, I can spend time with my friends.”

“We know that there’s a dedicated team at Genzyme”

“that works on Fabry disease.”

“They are kind people who took the time to take care of us...”

Only a few thousand people in the world are affected by Fabry disease.

We’re committed to improving those few thousand lives.
