

Emerging countries

Global demography has a lasting impact.

Emerging market countries are currently home to 30% of the world's population.

In these countries, an aging population.....and the change in lifestyle...could lead to an increased rate of diabetes, cardiovascular diseases and cancers.

Citizens want to have access to the same level of healthcare that is available to the most developed countries.

Sanofi has been present in those countries for more than 40 years...to put its treatments at everyone's disposal, ranging from vaccines to consumer healthcare products.

To be closer to patients' needs, roughly 40,000 employees work in emerging countries.

Because we are committed to serving as many patients as possible.
