

## Vaccines

Every year, 130 million children ... are born.

For each of these children, vaccination is the most effective method ... to prevent diseases.

That's why SANOFI Pasteur produces and distributes more than a billion vaccines ... against polio, influenza, meningitis, whooping cough and some tropical diseases.

More than ever, Sanofi Pasteur's teams are committed to research ... to develop new vaccines.

This research allows us to be working on ... the development of the first vaccine to prevent dengue:

an infectious disease that is transmitted by mosquitoes, which can cause very serious complications ... and that potentially threatens almost half of the world's population.

So that the saying "prevention is the best cure" becomes a reality.
